BioSystems, 23 (1990) 385–387
Elsevier Scientific Publishers Ireland Ltd.

Subject Index
Volume 23

adaptation, complex systems, self-organization, evolution, modeling, networks, 113
amoeboflagellate, *Willaertia magna*, *Naegleria*, flagellate, transformation kinetics, vahlkampfiid phylogeny, 75
AMP deaminase, metabolic control theory, metabolic regulation, cooperativity, control coefficients, anaplerotic cycle, 7
anaplerotic cycle, metabolic control theory, metabolic regulation, cooperativity, control coefficients, AMP deaminase, 7
artficical worlds design, modelling and simulation, knowledge based systems, 95
artifical worlds, computer ecosystem models, computer evolution models, 247
artificial worlds, brain models, neuromolecular computing, evolutionary learning, memory manipulation, 175

back-propogation, feedforward network, trained networks, 171
bifurcartion, evolution, 1
bioshpere, closed systems, endosymbiosis theory, evolution, Gaia, geophysiology, hierarchy theory, 371
bithorax complex, *Drosophila melanogaster*, quantitative model, ventral denticular patterns, 139
brain models, neuromolecular computing, evolutionary learning, memory manipulation, artificial worlds, 175

campanulaceae, epiphyte, mycorrhizae, fungal association, neotropics, Orchidaceae, Ericaceae, 65
cellulase, fungi, rumen, plant fibre, digestion, 53
cell cycle control, chronobiology, ultraradian cycles, cell cycle oscillator, 301
cell cycle oscillator, chronobiology, ultraradian cycles, cell cycle control, 301
chronobiology, ultraradian cycles, cell cycle oscillator, cell cycle control, 301
ciliates, sulfuretum, ultrastructure, culturing, 41
closed systems, bioshpere, endosymbiosis theory, evolution, Gaia, geophysiology, hierarchy theory, 371
CO_2 toxicity, oxygen and carbon dioxide transport, systemic circulation, hyperbaric environment, gas exchange, 21
coding, molecular networks, cytoskeleton, control model, 297
coding regions, DNA, electrion-ion interaction potential, 311
complementary, measurement, laws, rules, computation, 281
complex systems, self-organization, adaptation, evolution, modeling, networks, 113
computation, measurement, complementary, laws, rules, 281
computer ecosystem models, computer evolution models, artifical worlds, 247
computer evolution models, computer ecosystem models, artifical worlds, 247
control coefficients, metabolic control theory, metabolic regulation, cooperativity, AMP deaminase, anaplerotic cycle, 7
control model, molecular networks, cytoskeleton, coding, 297
cooperativity, metabolic control theory, metabolic regulation, control coefficients, AMP deaminase, anaplerotic cycle, 7
CPK images, novel molecular graphics, molecular design aid, transparency effect, hidden surfaces, 15
culturing, sulfuretum, ciliates, ultrastructure, 41
cyanobacteria, microbial mat, diatoms, green phototrophic bacteria, purple phototrophic bacteria, laminated sediment, ultrastructure, 345
cytoskeleton, molecular networks, control model, coding, 297

Delaware bay plankton community, stability-complexity relationships, loop analysis, entity role analysis, 359
diatoms, microbial mat, cyanobacteria, green phototrophic bacteria, purple phototrophic bacteria, laminated sediment, ultrastructure, 345
digestion, fungi, rumen, plant fibre, cellulase, 53
dinoflagellates, image analysis, motility, *Peridinium gatunense*, phototaxis, pigment bleaching, solar radiation, 335
discrete time and discrete event models, evolution of cooperation, distributed problem solving and simulation, recprocity, herd management models, experimental frames, 261
distributed problem solving and simulation, evolution of cooperation, recprocity, herd management models, discrete time and discrete event models, experimental frames, 261
DNA, coding regions, electrion-ion interaction potential, 311
Drosophila melanogaster, bithorax complex, quantitative model, ventral denticular patterns, 139

electrion-ion interaction potential, DNA, coding regions, 311
endosymbiosis theory, bioshpere, closed systems, evolution, Gaia, geophysiology, hierarchy theory, 371
entity role analysis, stability-complexity relationships, loop analysis, Delaware bay plankton community, 359
epiphyte, mycorrhizae, fungal association, neotropics, Orchidaceae, Ericaceae, campanulaceae, 65
Ericaceae, epiphyte, mycorrhizae, fungal association, neotropics, Orchidaceae, campanulaceae, 65
evolution, bifurcartion, 1
evolution, bioshpere, closed systems, endosymbiosis theory, Gaia, geophysiology, hierarchy theory, 371
evolution, complex systems, self-organization, adaptation, modeling, networks, 113
evolution, selection, simulation, genetic algorithm, 219
evolutionary learning, brain models, neuromolecular computing, memory manipulation, artificial worlds, 175
evolutionary learning, meta-rules, hierarchial systems, Markov processes, 161
evolution of cooperation, distributed problem solving and simulation, recprocity, herd management models, discrete time and discrete event models, experimental frames, 261
experimental frames, evolution of cooperation, distributed problem solving and simulation, recprocity, herd management models, discrete time and discrete event models, 261

feedforward network, back-propogation, trained networks, 171
flagellate, *Willaertia magna*, *Naegleria*, amoeboflagellate, transformation kinetics, vahlkampfiid phylogeny, 75
fungal association, epiphyte, mycorrhizae, neotropics, Orchidaceae, Ericaceae, campanulaceae, 65
fungi, rumen, plant fibre, cellulase, digestion, 53

Gaia, bioshpere, closed systems, endosymbiosis theory, evolution, geophysiology, hierarchy theory, 371
gas exchange, oxygen and carbon dioxide transport, systemic circulation, hyperbaric environment, CO_2 toxicity, 21
genetic algorithm, evolution, selection, simulation, 219
geophysiology, bioshpere, closed systems, endosymbiosis theory, evolution, Gaia, hierarchy theory, 371
green phototrophic bacteria, microbial mat, diatoms, cyanobacteria, purple phototrophic bacteria, laminated sediment, ultrastructure, 345

half-life, *Periplaneta americana*, model, simulation, peptide hormone, 31
herd management models, evolution of cooperation, distributed problem solving and simulation, recprocity, discrete time and discrete event models, experimental frames, 261
hidden surfaces, novel molecular graphics, molecular design aid, transparency effect, CPK images, 15
hierarchial systems, evolutionary learning, meta-rules, Markov processes, 161
hierarchy theory, bioshpere, closed systems, endosymbiosis theory, evolution, Gaia, geophysiology, 371
hyperbaric environment, oxygen and carbon dioxide transport, systemic circulation, gas exchange, CO_2 toxicity, 21

image analysis, dinoflagellates, motility, *Peridinium gatunense*, phototaxis, pigment bleaching, solar radiation, 335
informatic simplicity, MIRROR modelling, self-structuring, observational complexity, 231
information processing, molecular networks memory, reaction-diffusion systems, 291

knowledge based systems, modelling and simulation, artficical worlds design, 95

laminated sediment, microbial mat, diatoms, cyanobacteria, green phototrophic bacteria, purple phototrophic bacteria, ultrastructure, 345
laws, measurement, complementary, rules, computation, 281
loop analysis, stability-complexity relationships, Delaware bay plankton community, entity role analysis, 359

Markov processes, evolutionary learning, meta-rules, hierarchial systems, 161
measurement, complementary, laws, rules, computation, 281
memory, molecular networks information processing, reaction-diffusion systems, 291
memory manipulation, brain models, neuromolecular computing, evolutionary learning, artificial worlds, 175
meta-rules, evolutionary learning, hierarchial systems, Markov processes, 161
metabolic control theory, metabolic regulation, cooperativity, control coefficients, AMP deaminase, anaplerotic cycle, 7
metabolic regulation, metabolic control theory, cooperativity, control coefficients, AMP deaminase, anaplerotic cycle, 7
microbial mat, diatoms, cyanobacteria, green phototrophic bacteria, purple phototrophic bacteria, laminated sediment, ultrastructure, 345
MIRROR modelling, informatic simplicity, self-structuring, observational complexity, 231
model, *Periplaneta americana*, half-life, simulation, peptide hormone, 31
modeling, complex systems, self-organization, adaptation, evolution, networks, 113
modelling and simulation, knowledge based systems, artficical worlds design, 95
molecular design aid, novel molecular graphics, transparency effect, hidden surfaces, CPK images, 15

molecular networks, cytoskeleton, control model, coding, 297
molecular networks memory, information processing, reaction-diffusion systems, 291
motility, dinoflagellates, image analysis, *Peridinium gatunense*, phototaxis, pigment bleaching, solar radiation, 335
mycorrhizae, epiphyte, fungal association, neotropics, Orchidaceae, Ericaceae, campanulaceae, 65

Naegleria, *Willaertia magna*, amoeboflagellate, flagellate, transformation kinetics, vahlkampfiid phylogeny, 75
neotropics, epiphyte, mycorrhizae, fungal association, Orchidaceae, Ericaceae, campanulaceae, 65
networks, complex systems, self-organization, adaptation, evolution, modeling, 113
neuromolecular computing, brain models, evolutionary learning, memory manipulation, artificial worlds, 175
novel molecular graphics, molecular design aid, transparency effect, hidden surfaces, CPK images, 15

observational complexity, MIRROR modelling, informatic simplicity, self-structuring, 231
Orchidaceae, epiphyte, mycorrhizae, fungal association, neotropics, Ericaceae, campanulaceae, 65
oxygen and carbon dioxide transport, systemic circulation, hyperbaric environment, gas exchange, CO_2 toxicity, 21

peptide hormone, *Periplaneta americana*, half-life, model, simulation, 31
Peridinium gatunense, dinoflagellates, image analysis, motility, phototaxis, pigment bleaching, solar radiation, 335
Periplaneta americana, half-life, model, simulation, peptide hormone, 31
phototaxis, dinoflagellates, image analysis, motility, *Peridinium gatunense*, pigment bleaching, solar radiation, 335
pigment bleaching, dinoflagellates, image analysis, motility, *Peridinium gatunense*, phototaxis, solar radiation, 335
plant fibre, fungi, rumen, cellulase, digestion, 53
purple phototrophic bacteria, microbial mat, diatoms, cyanobacteria, green phototrophic bacteria, laminated sediment, ultrastructure, 345

quantitative model, bithorax complex, *Drosophila melanogaster*, ventral denticular patterns, 139

reaction-diffusion systems, molecular networks memory, information processing, 291
reciprocity, evolution of cooperation, distributed problem solving and simulation, herd management models, discrete time and discrete event models, experimental frames, 261
rules, measurement, complementary, laws, computation, 281
rumen, fungi, plant fibre, cellulase, digestion, 53

selection, evolution, simulation, genetic algorithm, 219
self-organization, complex systems, adaptation, evolution, modeling, networks, 113
self-structuring, MIRROR modelling, informatic simplicity, observational complexity, 231
simulation, evolution, selection, genetic algorithm, 219
simulation, *Periplaneta americana*, half-life, model, peptide hormone, 31
solar radiation, dinoflagellates, image analysis, motility, Peridinium gatunense, phototaxis, pigment bleaching, 335
stability-complexity relationships, loop analysis, Delaware bay plankton community, entity role analysis, 359
sulfuretum, ciliates, ultrastructure, culturing, 41
systemic circulation, oxygen and carbon dioxide transport, hyperbaric environment, gas exchange, CO_2 toxicity, 21

trained networks, feedforward network, back-propogation, 171
transformation kinetics, *Willaertia magna*, *Naegleria*, amoeboflagellate, flagellate, vahlkampfiid phylogeny, 75
transparency effect, novel molecular graphics, molecular design aid, hidden surfaces, CPK images, 15

ultraradian cycles, chronobiology, cell cycle oscillator, cell cycle control, 301
ultrastructure, microbial mat, diatoms, cyanobacteria, green phototrophic bacteria, purple phototrophic bacteria, laminated sediment, 345
ultrastructure, sulfuretum, ciliates, culturing, 41

vahlkampfiid phylogeny, *Willaertia magna*, *Naegleria*, amoeboflagellate, flagellate, transformation kinetics, 75
ventral denticular patterns, bithorax complex, *Drosophila melanogaster*, quantitative model, 139

Willaertia magna, *Naegleria*, amoeboflagellate, flagellate, transformation kinetics, vahlkampfiid phylogeny, 75
